

Discover Why  
Industrial Facilities Are  
Switching to Powerful,  
Non-Corrosive Cleaners

Traditional industrial cleaners are typically not environmentally friendly, containing harsh chemicals that are abrasive, corrosive, and incompatible with many surfaces. Specific problems industrial facilities face include difficult-to-remove oil and grease buildup on equipment, stains due to spills, greasy floors, and the lack of safe products to use that are still effective.

In addition, many highly regulated industries like food processing must adhere to stringent safety and cleanliness regulations to avoid legal consequences, hefty fines, and potential shutdowns. These facilities must prevent contamination and implement regular cleaning without using hazardous chemicals.

Industrial professionals are increasingly realizing the many benefits of using non-corrosive cleaners, degreasers, and rust removers. These powerful cleaners safely remove grime, dirt, and other substances that can otherwise accelerate wear on expensive machinery. Oil Eater® is a safe, effective, and eco-friendly cleaning solution that addresses even the most challenging sanitation concerns of strictly regulated industries. Oil eater is also a preferred option for many municipalities, fleet & transportation, and government cleaning programs.

Oil Eater® non-corrosive cleaners are highly effective at removing stains, oil, grime, and grease from a wide variety of surfaces. Our cleaners help customers maintain a safe and clean work environment and improve efficiency while complying with environmental regulations. This eBook will highlight the benefits and applications of choosing Oil Eater® industrial cleaners, degreasers, and non-acid-based rust removers.

# The Problem With Traditional Chemical Cleaners

Industrial facilities are looking for safe, environmentally-friendly cleaners that can handle common cleaning problems, such as:

## GREASE ON FLOORS

Heavy machinery can leave a greasy residue on industrial flooring, creating a safety risk of slip and fall injuries.

## HEAVY OIL AND GREASE BUILDUP

Industrial equipment and machinery are susceptible to thick layers of grease and oil buildup, which is difficult to remove and can lead to equipment damage, reduced efficiency, and lower productivity.

## REGULATORY COMPLIANCE

Industrial facilities need cleaning products that work and comply with specific industry regulations.

## STAINS AND DISCOLORATION

Stains caused by spills or leaks can create a negative visual impression of an industrial facility.

## SANITATION ISSUES

Maintaining a high level of sanitation in strictly regulated industries, such as food processing, is vital to maintaining proper safety and preventing contamination.

Traditional cleaners contain harsh, corrosive chemicals that can harm the environment or users, leave behind a strong chemical odor, and damage surfaces. Some existing eco-friendly products on the market are safe to use but are not as strong or effective against tough grease buildup in industrial settings.

# Benefits of Non-Corrosive, Water-Based Cleaners From Oil Eater®

The Oil Eater® product lineup is a series of non-corrosive, water-based cleaners and degreasers that meet the cleaning needs of most industrial settings. These high-quality products offer industrial-strength performance and excellent value. Our ultra-concentrated, heavy-duty cleaners and degreasers can tackle light, medium, or heavy cleaning tasks.

Oil Eater® contains biodegradable ingredients that are safer for the environment and humans, offering three times more active cleaning power than other traditional cleaners. Our general-purpose, water-based degreasers offer the following benefits for heavy-duty applications:

|   |  |
|---|--|
| <b>COMPATIBLE WITH CLEANING EQUIPMENT</b><br>Oil Eater® is compatible with common cleaning equipment, such as mops, floor scrubbers, carpet scrubbers, parts washers, and pressure washers. | <b>COMPLIANCE</b><br>Our <b>original formula</b> meets Boeing D6-17487 Rev. P specifications and USDA standards for food processing facilities A1, A4, and A8. |
| <b>COST SAVINGS</b><br>The dilutable super-concentrated formula maximizes margins, offering a lower cost per clean compared to our competitors' products.                                   | <b>SAFE AND ECO-FRIENDLY</b><br>Oil Eater® is safe, non-abrasive, non-corrosive, biodegradable, low-VOC, and not subject to Proposition 65.                    |
| <b>EFFECTIVE</b><br>Oil Eater® can eliminate tough stains caused by grease, oil, and other stubborn contaminants.   | <b>FRESH SCENT</b><br>Oil Eater® leaves a fresh scent rather than a chemical smell.  |
| <b>CLEANS VARIOUS SURFACES</b><br>The multi-surface cleaner is safe for heavy-duty cleaning and can be used on machinery, concrete, and metal.  |  |

# Applications of Oil Eater® Non-Corrosive Cleaners, Degreasers, and Rust Removers

Oil Eater® products meet the needs of a broad range of industries, including agriculture, automotive, food processing, industrial, manufacturing, oil and lube, and transportation. Our diverse product line offers safe and effective cleaning, rust removal, and degreasing for the following applications:

## Floor and General Purpose Cleaning

The Oil Eater® cleaner and degreaser original formula offers the best value for general-purpose cleaning jobs. It is effective for cleaning engines, grills, parts, tools, concrete floors, countertops, and more.

## Degreasers for Food Processing Equipment

Oil Eater® Clear™ is the ideal solution for food processing facilities. The highly concentrated degreaser contains an unscented heavy-duty alkaline base that meets VOC requirements, making it a perfect solution for cleaning stoves, exhaust hoods, tile, and cooking equipment.

## Parts Washing

The Oil Eater® ready-to-use parts washing cleaner and degreaser fluid is water-based, biodegradable, and more effective than most solvents. It is environmentally friendly and non-hazardous, saving end users time and money.

## Rust Removal for Industrial Tools

The water-based Oil Eater® Overnight Rust Remover safely removes rust down to bare metal without using acid, providing effortless no-scrub cleaning of automotive parts, industrial tools, cast iron, antiques, and more.

## Vehicle Fleet Washing

Oil Eater® ultra-concentrated Fleet Wash can remove tough grime from wheels, tires, rubber, vinyl, paint, and aluminum components to ensure a well-cleaned and maintained fleet.

## Why Choose Oil Eater®?

For over 30 years, industry professionals have trusted the reliable performance of Oil Eater® cleaners, degreasers, and rust removal products. Our mission is to help customers tackle even the most challenging cleaning issues, getting the job done faster, safer, and more affordably. Oil Eater® cleaners and degreasers are safe to use on most parts, equipment, and surfaces, containing ingredients that do not cause harm to humans or the environment.

Our family-owned, privately-owned business consistently delivers excellent customer service and made-in-the-USA products from our large-scale, quality-controlled production facilities. We specialize in automotive, EPA, household, and industrial chemicals and are a private-label manufacturer of over 100 categories, including products sold by every major retailer in the United States.

# Choose Powerful, Non-Corrosive Cleaners From Oil Eater®

Oil Eater® has played a vital role as an industry-leading expert in chemical product innovation. For 30+ years, Oil Eater® products have provided safe and powerful cleaning, degreasing, and rust removal for a broad range of applications in commercial and industrial facilities. In addition to water-based, non-corrosive cleaners, we offer a full range of other cleaning products:

- Absorbent pads and rolls
- Cleaning equipment and accessories
- Glass treatment
- Odor removal
- Paint and graffiti scuff removers
- Parts washing fluids
- Rust removers
- Spill clean up
- Fleet wash solutions
